To match SA208X & SA210X ovens (page 21)

Lift-up doors in four designs, including a 70cm version, compliment many of the Smeg oven models. The door glides up and over, back into the kitchen cabinetry to reveal the microwave oven when it needs to be accessed. This option is popular when creating a clean lined minimalist decor, often with the stainless steel appliance range.

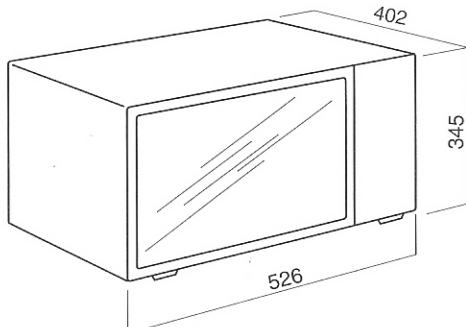

All of these lift up doors can be installed above the respective ovens and create a clean extended vertical line to match the oven.

The multi-purpose SA971C combination microwave and conventional convection oven is a stunning, space saving appliance that can cook using microwave and top and bottom conventional elements. This compact oven has 10 microwave power levels, five auto settings and a speedy cook mode. Combi cooking uses a variable balance of the two technologies.

The SA32M microwave oven is a versatile appliance with one touch speedy heating, automatic defrosting by either weight or time, twelve hour and twenty four hour digital clock and an automatic delay start selection.

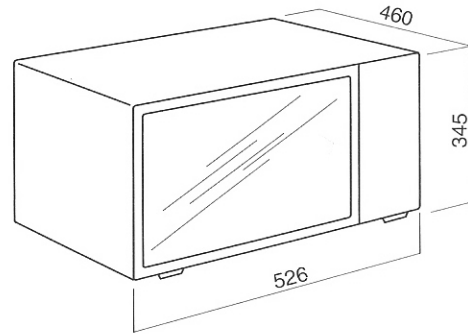

The satin stainless steel SA31MX microwave oven and SA985CX convection, fan assisted microwave oven are both 30 litre capacity and are distinguished by the easy to use main scrolling control knob with accompanying digital display of weight and cooking times. The SA985CX also displays time of day in either 12 or 24 hour modes and has an all stainless steel interior.
